

192.168.2.155 face parte din clasa 192.168.0.0/23. The correct answer is 'False'. Adresa de broadcast nu se poate calcula pe baza adresei de retea si a netmask-ului. The correct answer is 'False'. Apelul bind() poate fi folosit in clienti TCP. The correct answer is 'True'. Apelul bind() este obligatoriu in orice server TCP. The correct answer is 'True'. In LAN pot exista mai multe calculatoare cu adresa 192.168.1.1. The correct answer is 'False'. O retea cu netmask-ul 255.255.255.0 are 2^8=256 ip-uri. The correct answer is 'True'. Nu toate adresele IP din clasa 10.0.0.0/6 sunt private. The correct answer is 'True'. Un switch nu poate transporta pachete UDP. The correct answer is 'False'. 192.168.0.2/24 si 192.168.1.6/24 fac parte din aceasi retea. The correct answer is 'False'. MAC inseamna media access control. The correct answer is 'True'.

DNS nu este situat la nivelul Retea. The correct answer is 'True'. 00:00:00:00:00:00 nu este adresa MAC de broadcast. The correct answer is 'True'. HTTP foloseste protocolul TCP. The correct answer is 'True'. Adresa 193.231.20.0 poate fi adresa de retea. The correct answer is 'True'. Adresa 43.23.87.64/27 poate fi adresa de retea. The correct answer is 'True'. O retea cu netmask-ul 255.255.255.0 are 2^8=128 ip-uri. The correct answer is 'False'. Adresa 127.0.0.1 nu poate fi adresa de broadcast. The correct answer is 'True'. Adresa MAC este reprezentata pe 48 de biti. The correct answer is 'True'. Un switch este mai performant ca un hub. The correct answer is 'True'. Adresa 192.168.0.0 poate fi adresa de retea. The correct answer is 'True'.

Adresa 193.231.20.4 poate fi adresa de retea. The correct answer is 'True'. Nu toate adresele IP din clasa 172.16.0.0/12 sunt private. The correct answer is 'False'. O clasa /8 se poate imparti in 4 clase /9. The correct answer is 'False'. Un calculator poate avea mai multe adrese IP. The correct answer is 'True'. 172.31.0.1 nu este o adresa IP privata. The correct answer is 'False'. TCP este situat la nivelul Retea. The correct answer is 'False'. Adresa 192.168.0.255 poate fi adresa de retea. The correct answer is 'False'. HTTP inseamna Hypertext Transfer Protocol. The correct answer is 'True'. 172.16.0.1 este o adresa IP privata. The correct answer is 'True'. Apelul bind() este obligatoriu in orice client UDP. The correct answer is 'False'.

Apelul recvfrom() nu trimite date catre serverul TCP. The correct answer is 'True'. 192.168.1.155 face parte din clasa 192.168.1.0/24. The correct answer is 'True'. Default gateway-ul unui calculator se afla in aceeasi retea cu el. The correct answer is 'True'. Apelul bind() este obligatoriu in orice server UDP. The correct answer is 'True'. 192.168.1.2/24 si 192.168.1.6/22 fac parte din aceasi retea. The correct answer is 'False'. Un router se leaga de un calculator cu un cablu Straight-Through. The correct answer is 'False'. 127.0.0.1 nu poate fi setata pe un sistem ca default gateway. The correct answer is 'False'. Prescurtarea CLI vine de la Command Line Interface. The correct answer is 'True'. Apelul bind() nu poate fi folosit in clienti UDP. The correct answer is 'False'. 127.0.0.1 nu poate fi setata pe un sistem ca server DNS. The correct answer is 'True'.

172.32.0.1 este o adresa IP privata.

The correct answer is 'False'.

Apelul sendto() trimite date catre serverul UDP.

The correct answer is 'True'.
